

London City Airport

We provide Air Traffic Control (ATC) services at 14 UK airports, including London City Airport. At London City Airport, we provide tower and engineering services.

TOWER

This is an ATC service provided for the airport and surrounding airspace. The controllers will look out of the tower windows, as well as at the ATC equipment, to give aircraft clearance to taxi, take-off and land.

THE OPERATION: 2015

The current tower opened in 1987 and NATS has been providing an ATC service since then.

ENGINEERING

An engineering team, based at the airport, is responsible for maintaining air traffic control equipment, including navigation aids on the airfield, such as the Instrument Landing System (ILS).

DESTINATIONS

All of the destinations are within Europe with the exception of flights to New York.
